PROFESSIONAL SUMMARY

Frontend developer specializing in Vue 3 / Nuxt 3 and React / TypeScript, with a track record of turning broken codebases into production-grade SaaS products. Rebuilt a FinTech platform from scratch in 2 months – full architectural rewrite, real users, shipped. Strong in component architecture, typed state management (Pinia, Redux), and contract-first API integration via auto-generated OpenAPI clients. Former medical professional: precision, structured thinking, and zero tolerance for ambiguity translate directly into clean, maintainable code. Motivated by novel problems, greenfield architecture, and products with real engineering challenges.

CORE COMPETENCIES

Vue 3 / Nuxt 3

React / Next.js

TypeScript

State Management (Pinia / Redux)

Component Architecture

REST API Integration (OpenAPI / Orval)

Performance Optimization

Developer Tooling & Automation

WORK EXPERIENCE

Sirius.expertDec 2024 – Jun 2026

Frontend Web Developer | Chisinau, Moldova (Remote)

- **Full architectural rewrite:** 0 to working product in 2 months (Nuxt 3, Vue 3, TypeScript, Pinia, UnoCSS) – now in production with real users.
- Built editable table engine with inline validation, dynamic rows, and drag-and-drop.
- Implemented multi-document tab editing for invoices and offers, each instance with fully isolated state.
- **Factory pattern refactor:** redesigned invoice generator from singleton Pinia store to factory pattern, enabling multiple independent instances per browser tab.
- **Shadow DOM migration:** migrated invoice preview from iframe to Shadow DOM, eliminating style bleed and improving render isolation.
- Built custom filter system with mirrored state: FilterDropdown selections create synchronized FilterPill instances sharing a single source of truth.
- **Typed API integration:** introduced Orval to auto-generate typed API clients from OpenAPI specs, eliminating manual maintenance and reducing integration errors.
- Built i18n automation tool using Google Sheets as the translation source, replacing manual copy-paste with a single-command workflow.
- Defined responsive behavior logic and implemented mobile-first adaptations for complex, data-heavy screens.
- Implemented auth flows, permission-based layouts, data visualization with charts, and full Agile feature delivery end-to-end.
- Collaborate with product designer in Figma; integrate PostHog for analytics and Sentry for real-time error tracking.

Confidential (NDA)Nov 2021 – Sep 2024

Technical Support / Financial Operations Specialist | Chisinau, Moldova

- Processed financial operations including KYC/AML compliance, cryptocurrency transactions, and fraud detection; promoted to Financial Operations Specialist.
- Built a Chrome extension (JavaScript) to extract and transfer DOM data across internal pages – adopted by the team as a daily productivity tool.
- Developed a Slack-to-Jira integration using Deno, Jira REST API, and OAuth, enabling ticket creation directly from Slack messages.
- Automated Google Sheets workflows with Google Apps Script, eliminating hours of daily manual data processing.

Global Voyager AssistanceMar 2019 – May 2021

Insurance Coordinator | Odesa, Ukraine

PROJECTS

Twitch Subscriber Bot Production

Node.js service with full OAuth 2.0 authorization code flow (CSRF protection, token refresh, PostgreSQL persistence), in-memory write-through cache, and reconnection logic with backoff. Running in production.

Node.js | Express | PostgreSQL | Twitch API | OAuth 2.0

Slack → Jira Integration Tooling

Webhook-based integration enabling ticket creation directly from Slack messages. Handles OAuth flow, message parsing, and Jira REST API v3 mutations. Adopted as an internal team tool.

Deno | TypeScript | Jira REST API | OAuth 2.0 | Slack API

i18n Automation Tool DX

CLI tool using Google Sheets as the translation source for a Nuxt 3 / vue-i18n project. Replaced a manual copy-paste workflow with a single command.

TypeScript | Google Sheets API | Vue-i18n | Nuxt 3

Chrome Extension — DOM Data Transfer Tooling

Extension that extracts structured data from DOM elements and transfers it across internal pages. Adopted by the team as a daily productivity tool.

JavaScript | Chrome Extension API

EDUCATION

Master's Degree, Dentistry — Odessa National Medical University

2013 – 2018

SKILLS

Frontend: Vue.js, Nuxt 3, React, Next.js, TypeScript, JavaScript, Pinia, UnoCSS, Tailwind, Shadow DOM

Tooling: Orval, Sentry, PostHog, Figma, i18n, Vite, Git

Backend / APIs: Express.js, Deno, Google Apps Script, OAuth, REST, OpenAPI, Jira REST API

Languages: Ukrainian (native), Russian (native), English (full professional), Czech (limited working)
