PROFESSIONAL SUMMARY

Frontend developer who rebuilt a production FinTech SaaS from scratch - full architectural rewrite in Nuxt 3 / Vue 3 / TypeScript as lead frontend engineer, shipped in two months, now live with real B2B customers. On the React side: a custom physics simulation portfolio and a typed e-commerce cart implementation. Core strength is turning chaos into structure: messy requirements into clean flows, unclear APIs into typed schemas, inconsistent UX into predictable components. Non-linear path (Dentistry to FinOps to Engineering) built precision, automation instincts, and the habit of designing before building.

CORE COMPETENCIES

Vue.js / Nuxt 3

React / TypeScript

State Management (Pinia)

CSS Frameworks (UnoCSS, Tailwind)

API Integration (Orval)

Testing (Vitest, Playwright)

Docker & Deployment

Performance Optimization

WORK EXPERIENCE

Sirius.expert December 2024 - June 2026

Frontend Web Developer

- Led full architectural rewrite of a broken FinTech SaaS codebase as lead frontend engineer: 0 to production in 2 months using Nuxt 3, Vue 3, TypeScript, Pinia, UnoCSS - serving real B2B customers
- Built customer-facing editable table engine with inline validation, dynamic rows, and drag-and-drop
- Implemented multi-document tab editing for customer invoices and offers, each instance with fully isolated state
- Refactored invoice generator from singleton Pinia store to factory pattern, enabling multiple independent instances per browser tab - eliminated a class of state-bleed bugs
- Introduced Orval for auto-generating typed API clients from OpenAPI specs, eliminating manual maintenance and reducing integration errors
- Built i18n automation tool using Google Sheets as translation source: replaced per-locale manual file edits with a single CLI command
- Wrote unit tests with Vitest (API validation, draft validation, Zod schema validation) and end-to-end tests with Playwright (transaction upload flow)

Confidential (iGaming platform, NDA) November 2021 - September 2024

Financial Operations Specialist / Internal Developer

- Built a Chrome extension (JavaScript) to extract structured data from iGaming back-office tables and transfer it across internal admin screens - self-initiated, adopted by the whole team as a daily productivity tool
- Developed a Slack-to-Jira ticket integration using Deno, TypeScript, Jira REST API v3, and OAuth 2.0; enabled operations and compliance teams to file tickets without leaving Slack
- Automated Google Sheets reporting pipelines with Google Apps Script: replaced recurring manual data-entry workflows with scheduled scripts, eliminating hours of daily operator work

Global Voyager Assistance March 2019 - May 2021

Insurance Coordinator

- Coordinated international insurance and medical assistance cases across EU partner networks; managed multi-party communication under time-sensitive conditions

PROJECTS

Personal Portfolio React 19

React 19 portfolio site with a custom physics-based background: 1,225 interconnected SVG nodes with real-time mouse repulsion, Gaussian ripple propagation on click, and periodic auto-rotation.

React 19, TypeScript, Tailwind CSS v4, Vite

Noire Winery React 19

E-commerce landing page with a full cart system: typed CartContext (React Context + useCallback), animated cart modal with quantity management, Leaflet map integration, and Vercel Analytics instrumentation.

React 19, TypeScript, Tailwind CSS, react-leaflet, Vite

Ukraine War Map Vue 3

Interactive geospatial visualization of the war in Ukraine from February 2022 onwards. Timeline playback at 20 days/second with a zoomable histogram lens, heatmap mode with per-region event-type breakdowns, 3D city spike and bar chart overlays rendered with Three.js.

Vue 3, TypeScript, MapLibre GL JS, Three.js, Vite, Vercel

PDFloom Full-Stack

Full-stack drag-and-drop PDF template designer with data binding to a live inventory/stock-tracking system. Frontend: resizable A4 canvas editor, live debounced PDF preview, ResizeObserver-based auto-scaling.

Nuxt 4, Vue 3, NestJS, TypeScript, MongoDB, Puppeteer, JWT, Docker, Vitest, Jest

EDUCATION

Master's degree, Dentistry Odessa National Medical University

2013 - 2018

SKILLS

Frontend: Vue.js, Nuxt 3, React, TypeScript, Pinia, UnoCSS, Tailwind

Tools & Testing: Orval, Vitest, Playwright, Docker, Lighthouse, Sentry, PostHog

Backend & Scripting: Express.js, JavaScript, Google Apps Script, Deno, OAuth, Jira REST API

Other: Shadow DOM, i18n, Figma
